Sia ™: Next Generation Auto Transcript Processor

Revolutionizing the Admissions
Process for Universities...

An Introduction

In higher education, the current methods of transcript processing can be time-consuming, error-prone, and inefficient, leading to delays in academic evaluations, hindering student progression, and negatively impacting institutional performance.

As the world of education continues to evolve, universities are grappling with the challenge of efficiently processing an ever-increasing amount of transcripts, once a cumbersome and error-prone task that can now be easily managed with

Sia's Auto Transcript Processor.

Sia's Automated Transcript Processor not only automates the existing manual process of transcript processing but also speeds up transcript processing as the system is capable of processing several thousand transcripts in a few seconds, and that too, with high levels of accuracy, regardless of the format of the transcript.

Sia, with its out-of-the-box, intricate image recognition algorithms, can read, detect, and extract courses, programmes, credits, and GPA-related metrics from any transcript instantly. Once the transcripts are processed, the extracted data is then pushed automatically to a college's or university's Student Information System and/or Customer Relationship System and/or any other systems.

Manual Processing		Sia Auto Transcript Processor
3-4 Hours	Processing Time	5 Seconds
31%	Efficiency and Productivity	96%
Low	Resource Efficiency	High
Stagnant	Enrollments	⬆ by 42%
Low	Accuracy	100%

Features

Integration

Sia offers seamless integration with hundreds of software applications commonly used in higher education today, supported by its own REST APIs and OneOrigin's highly experienced professional integration services team.
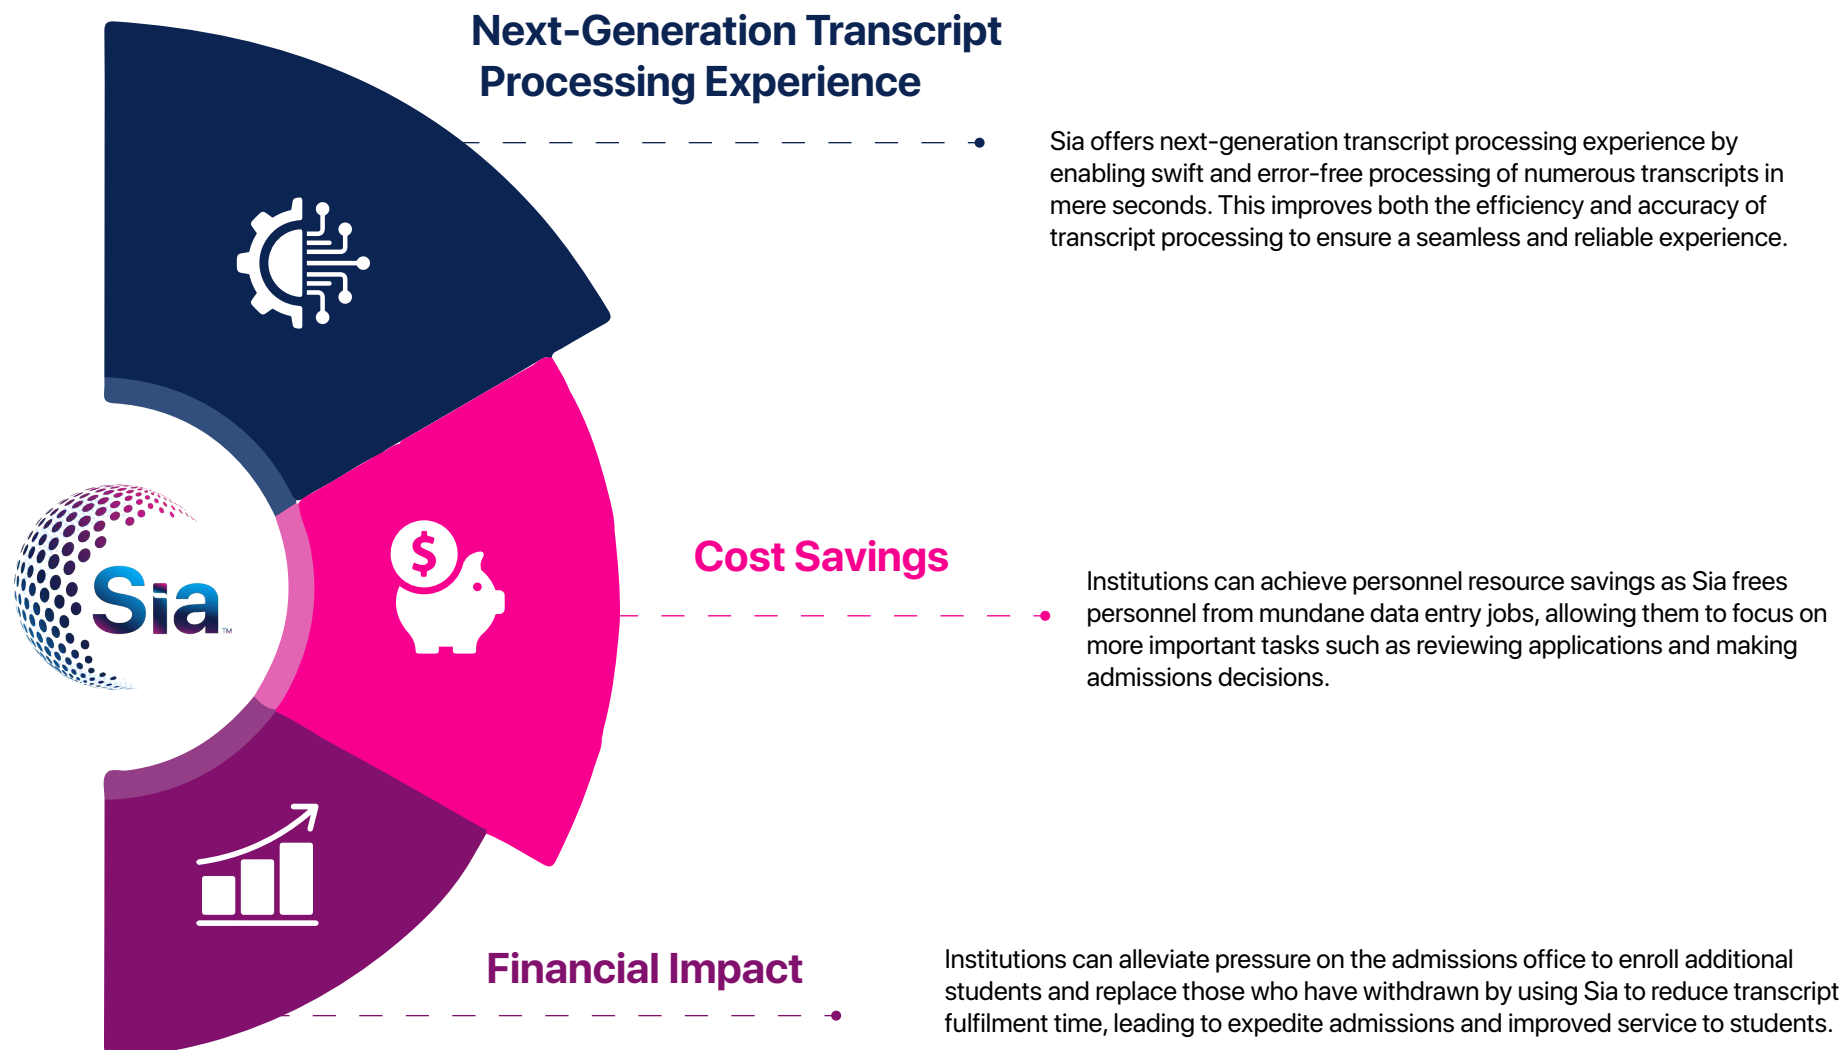

Security

Sia's automated security controls strictly adhere to SOC2 and FERPA standards, ensuring that your data is never used for any purpose except what is intended.

Purpose-Built for Higher Education

Sia is powered by a unified AI engine that includes purpose-built Natural Language Processing (NLP) models and Machine Learning (ML) algorithms tailored specifically for reading transcripts in higher education. This technology enables Sia to automatically acquire and refine knowledge from new datasets without any human intervention.
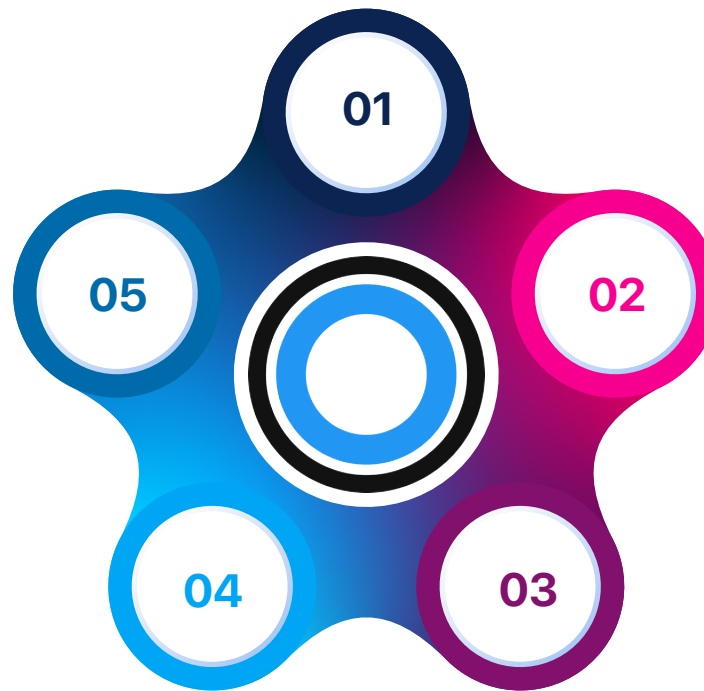

Benefits

Next-Generation Transcript Processing Experience

Sia offers next-generation transcript processing experience by enabling swift and error-free processing of numerous transcripts in mere seconds. This improves both the efficiency and accuracy of transcript processing to ensure a seamless and reliable experience.

Cost Savings

Institutions can achieve personnel resource savings as Sia frees personnel from mundane data entry jobs, allowing them to focus on more important tasks such as reviewing applications and making admissions decisions.

Financial Impact

Institutions can alleviate pressure on the admissions office to enroll additional students and replace those who have withdrawn by using Sia to reduce transcript fulfilment time, leading to expedite admissions and improved service to students.

Why Choose OneOrigin

EdTech Experience

OneOrigin has a wealth of experience in designing and developing complex software applications and technology solutions for higher education institutions over the past several years, with a collective experience of over 120 years in the EdTech space.

Award Winning

OneOrigin was recognized as one of the world's 200 elite companies at ASU-GSV 2020. It is ranked by StartUS Insights among the top 5 cognitive computing startups and recognised by TechCrunch as a promising and innovative upcoming company.

Cutting-Edge Technology Solutions

OneOrigin offers a range of technology solutions, including web and application development, DevOps, ERP and CRM, enterprise mobility and digital content management, augmented and mixed reality, and artificial intelligence, to enhance the student lifecycle from new student acquisition to enrollment and student success.
